What is claimed is:

- 1-10. (cancelled)
- 11. (previously presented) A gunning refractory composition consisting essentially of 40 90 dry weight % of amorphous silica aggregates, up to 40 dry weight % of alumina-based compounds, 10 15 dry weight % of clay, 0.2 2.0 dry weight % of a chemical binder and further containing 2 8% of water.
- (previously presented) A gunning refractory composition according to claim 11, wherein the amorphous silica aggregates comprise vitreous silica.
- 13. (previously presented) A gunning refractory composition according to claim 11, wherein the alumina based compounds comprise materials selected from the group consisting of kyanite, and alusite, chamote, mullite and mixtures thereof.
- 14. (previously presented) A gunning refractory composition according to claim 11, wherein the alumina-based compounds content is between 20 40 dry weight %.
- 15. (previously presented) A gunning refractory composition according to claim 11, wherein the chemical binder is a mineral chemical selected from the group consisting of phosphoric acid, acid alumina phosphate, alumina sulphate and sodium silicate.
- 16. (previously presented) A gunning refractory composition according to claim 11, wherein the refractory components have 95 wt. % of grain size lower than 4 mm.
- 17. (previously presented) A gunning refractory composition according to claim 16, wherein the refractory components have 100 wt. % of grain size lower than 5.6 mm.
- 18. (previously presented) A process for the repair of a hot silica refractory wall comprising the steps of
 - a) conveying a refractory composition consisting essentially of 40 90 dry weight % of amorphous silica aggregates, up to 40 dry weight % of alumina based compounds, 10 15 dry weight % of clay, 0.2 2.0 dry weight % of a chemical binder and further containing 2 8% of water to a gunning nozzle:
 - b) mixing the refractory composition with water in the gunning nozzle; and
 - c) gunning the obtained mixture against the hot refractory wall.
- (previously presented) A process according to claim 18, wherein the amorphous silica aggregates comprise vitreous silica.

- 20. (previously presented) A process according to claim 18, wherein the alumina based compounds comprise materials selected from the group consisting of kyanite, and alusite, chamote, mullite, and mixtures thereof.
- 21. (previously presented) A process according to claim 18, wherein the alumina based compounds content is between 20 40 dry weight %.
- 22. (previously presented) A process according to claim 18, wherein the chemical binder is a mineral selected from the group consisting of phosphoric acid, acid alumina phosphate, alumina sulphate and sodium silicate.
- 23. (previously presented) A process according to claim 18, wherein the refractory components have 95 wt. % of grain size lower than 4 mm.
- (previously presented) A process according to claim 23, wherein the refractory components have 100 wt. % of grain size lower than 5.6 mm.
- 25. (previously presented) A process according to claim 18, wherein the refractory wall is a coke oven wall
